Project: Mini Project Manager

Build a small **Project Management** web app using the stack below.

Core Features

1. **Authentication**
    - User Signup / Login with email & password
    - Use **JWT** for authentication
    - Protect routes (API + frontend pages)
2. **Projects**
    - Each user can manage their own projects
    - A project has: `title`, `description`
3. **Tasks**
    - Tasks belong to a project
    - Each task has:
        - `title`, `description`, `status` (`todo`, `in-progress`, `done`), `dueDate`
    - Allow user to:
        - Create / Edit / Delete tasks
        - Filter/sort tasks by status and due date

Required Stack

- **Frontend:** React + Next.js
- **State Management:** Redux (Redux Toolkit preferred)
- **Backend:** Next.js / Node.js + Express
- **Database:** MongoDB (Atlas or local)
- **Auth:** JWT-based
- **API:** RESTful endpoints

Submission Instructions

- Share a link to a public GitHub repository
- Include a clear `README.md` with:
    - Setup instructions (both frontend & backend)
    - Sample `.env.example` file
    - Any important notes about your implementation
- Provide a deployed version URL (Optional)
